Homework Assignment 1: Reflections, ideas, and planning

- We did the reports in 9/15 because we didn't have class the 8th

1. After saying my idea in front of the class, the professor said about the complexity on the program. For that reason, I will try to think of an easier idea, instead of using algorithm to create path for the application that I have in mind. Thinking of a way to implement a way to get routes to run around my house can be done in other ways. At least I know that I can think of more details and better ways to do it.

Everyone had good ideas since is the second class maybe we don't have all the ideas fully developed that's why maybe we need to think more. I think saying my idea out loud was a good thing to do, that way I can improve what I want to do.

2. I think when an app resolves a problem and helps a group of people, with just the satisfaction of that is enough. Some developers create apps in groups to solve task and make life easier maybe with just that is okay.

3. A good website that provides a good UI is google Maps, even that is an application for many years and created by professional developers is an excellent place to get ideas and more for my project that is about navigation.

4. Yes, I still need to think about complexity and what exactly I want to create and how much do I have to do it.
